S.B. JAIN INSTITUTE OF TECHNOLOGY MANAGEMENT & RESEARCH, NAGPUR

Practical 02

Aim: To understand and demonstrate the use of basic commands in different operating systems (Windows, Linux, and UNIX) for managing files, directories, permissions, and user interactions through a terminal or command-line interface.

Name:	Prithviraj Bele
USN:	CD24034

Semester / Year:	3rd SEM / 2nd YEAR
Academic Session:	2026-2027

Date of Performance:

Date of Submission:

Department of Emerging Technologies, SBJITMR, Nagpur.

❖ **Aim:** To understand and demonstrate the use of basic commands in different operating systems (Windows, Linux, and UNIX) for managing files, directories, permissions, and user interactions through a terminal or command-line interface.
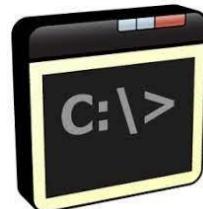

❖ **Objectives:**

1. To learn and practice fundamental command-line operations for file and directory management.
2. To explore and utilize user and permission management commands effectively.
3. To enhance system administration skills by working with commands across different operating systems.

❖ **Requirements:**

Hardware Requirements:

- **Processor**: Multi-core CPU, Intel Core i3 (3.0 GHz) or higher
- **RAM**: Minimum 4 GB (8 GB recommended for optimal performance)
- **Storage**: 100 GB HDD or SSD (Solid State Drive) for faster access
- **Network Interface**: Ethernet or Wi-Fi adapter for connectivity

Software Requirements:

- **Operating System**: Windows 10/11, Linux (Ubuntu 20.04/CentOS 8), UNIX-based OS
- **Command-line Interface**: PowerShell or Command Prompt (Windows), Terminal (Linux/UNIX)
- **Text Editor**: Nano, Vim, or Visual Studio Code for file editing
- **Administrative Privileges**: Superuser (Linux/UNIX) or Administrator (Windows) access

❖ **Theory:**

In system administration, command-line interfaces (CLI) are essential tools for managing and interacting with operating systems like Windows, Linux, and UNIX. Commands allow users to perform various tasks such as navigating directories, managing files, controlling permissions, and monitoring system performance. Each operating system provides a set of built-in commands, such as 'man', 'ls', 'cd', 'mkdir', and 'chmod', to facilitate efficient system management. Understanding these commands and their syntax is crucial for automating tasks, enhancing security, and ensuring optimal system functionality. This practical aims to develop foundational skills in executing and applying basic commands across different platforms.

Department of Emerging Technologies, SBJITMR, Nagpur.

❖ **Commands:**

1. **Display User Manual of a Command**
   - Functionality: Shows the manual page with details about a command's usage, options, and arguments.
   - Syntax: man <command>
   - Example: man ls

2. **Change Current Working Directory**.
   - Functionality: Changes the terminal's current working directory.
   - Syntax: cd <directory-path>
   - Example: cd /home/user/Documents.

3. **List Contents of the Current Directory.**
   - Functionality: Lists all files and directories in the current location.
   - Syntax: ls
   - Example: ls

4. **Read/Modify/Concatenate Text Files.**
   - Functionality: Displays or manipulates file content.
   - Syntax:
     - Read: cat <filename>
     - Modify: 'nano <filename>
     - Concatenate: cat <file1> <file2> > <outputfile>

5. **Create a New Directory**.
   - Functionality: Creates a new directory at the specified path.
   - Syntax: mkdir <directory-name
   - Example: mkdir newdir

6. **Display Current Working Directory.**
   - Functionality: Prints the current directory path.
   - Syntax: pwd
   - Example: pwd

7. **Write Arguments to Standard Output.**
   - Functionality: Prints the provided string or variables.
   - Syntax: echo <arguments>
   - Example: echo Hello World

8. **Remove a File**.
   - Functionality: Deletes a specified file.
   - Syntax: rm <filename>
   - Example: rm file.txt

9. **Delete a Directory.**
   - Functionality: Removes an empty directory.
   - Syntax: rmdir <directory-name>
   - Example: rmdir olddir

10. **Copy a File or Directory.**
    - Functionality: Copies a file or directory to a destination.
    - Syntax: cp <source> <destination>
    - Example: cp file.txt backup/

11. **Switch to Root User.**
    - Functionality: Gains root privileges temporarily.
    - Syntax: sudo su
    - Example: sudo s

12. **Move Files or Directories.**
    - Functionality: Moves or renames files and directories.
    -Syntax: mv <source> <destination>
    - Example: mv file.txt newdir/

13. **Search for a String in a File.**
    - Functionality: Searches for a specific word or pattern in a file.
    - Syntax: grep "<string>" <file>
    - Example: grep "error" log.txt

14. **Print Top N Lines of a File.**
    - Functionality: Displays the first N lines of a file.
    - Syntax: head -n <N> <file>
    - Example: 'head -n 10 file.txt'

15. **Print Last N Lines of a File.**
    - Functionality: Displays the last N lines of a file.
    - Syntax: tail -n <N> <file>
    - Example: 'tail -n 10 file.txt

16. **Remove Read Permission from Owner.**
    - Functionality: Revokes the owner's read permission for a file.
    - Syntax: chmod u-r <filename>
    - Example: chmod u-r file.txt

17. **Change Specific Permissions.**
    - Functionality: Sets or removes specific file permissions.
    -Syntax: chmod u+r,w-x,g+w <filename>
    - Example: chmod u+r,w-x,g+w file.txt

18. **Add Write Permission to Owner, None to Others**.
    -Functionality: Allows write access for the owner only.
    - Syntax: chmod u+w,o-rwx <filename>
    - Example: chmod u+w,o-rwx file.txt

19. **Assign Permissions to Users.**
    - Functionality: Modifies file access for users, groups, and others.
    - Syntax: chmod u+rwx,g+rx,o+r <filename>
    - Example: 'chmod u+rwx,g+rx,o+r file.txt

20. **Assign R/W/X to Others.**
    - Functionality: Gives read, write, and execute permissions to others.
    - Syntax: chmod o+rwx <filename>
    - Example: chmod o+rwx file.txt

21. **Remove All Permissions from All Users.**
    - Functionality: Clears all permissions on a file.
    - Syntax: 'chmod a-rwx <filename>
    - Example: 'chmod a-rwx file.txt

22. **Remove Read Permission Using Absolute Mode.**
    - Functionality: Uses numeric mode to restrict read access.
    - Syntax: chmod 700 <filename>
    - Example: chmod 700 file.txt

23. **Set R/W for Owner, None for Group/Other.**
    - Functionality: Assigns permissions in numeric mode.
    - Syntax: chmod 600 <filename>
    - Example: chmod 600 file.txt'

24. **Add Execute for Owner, Read for Group/Others.**
    - Functionality: Adds execution and read access.
    - Syntax: chmod u+x,g+r,o+r <filename>

- Example: chmod u+x,g+r,o+r file.txt

25. **Add Execute Permission to All Users.**
    - Functionality: Enables execution by everyone.
    - Syntax: chmod a+x <filename>
    - Example: chmod a+x script.sh

❖ **Conclusion:** In conclusion, understanding and using essential operating system commands like **'ls', 'cd', 'cp', 'mv', and 'chmod'** enables efficient file management, navigation, and permission control. Tools like **'grep', 'head', and 'tail'** enhance data processing. Mastery of these commands improves system administration, task automation, and overall system security and performance.

❖ **Discussion Questions:**

1. **What is the significance of the pwd command in a Linux environment?**
   Answer: The pwd (print working directory) command displays the absolute path of the current working directory. It helps verify the user's present location in the file system. Syntax: pwd.

2. **Explain the function of the cp command and its common options.**
   Answer: The cp command copies files or directories. Syntax: cp <source> <destination>. Options like -r copy directories recursively, and -i prompts before overwriting.

3. **How does chmod 700 affect file permissions, and what does each digit represent?**
   Answer: chmod 700 grants full permissions (read, write, execute) to the owner and no permissions to others. The digits represent permissions for the owner, group, and others, respectively.

4. **Describe the difference between head and tail commands in Linux.**
   Answer: The head command displays the first N lines of a file, while tail shows the last N lines. Both accept the -n option to specify the number of lines.

5. **What is the purpose of the grep command, and how is it used with regular expressions?**
   Answer: The grep command searches for patterns within files using regular expressions. Syntax: grep <pattern> <file>. It supports options like -i for case-insensitive search and -v to invert the match.

🖥️ WINDOWS COMMAND PROMPT (CMD) COMMANDS

1 Display Current Working Directory

- **Command:** cd

- **Example:** cd

```
Command Prompt
Microsoft Windows [Version 10.0.19045.6466]
(c) Microsoft Corporation. All rights reserved.

C:\Users\a>cd
C:\Users\a
```

2 Change Directory

- **Command:** cd <path>

- **Example:** cd Documents

```
C:\Users\a> cd Documents

C:\Users\a\Documents>
```

3 List Directory Contents

Command: dir

```
:\Users\a\Documents> dir
Volume in drive C has no label.
Volume Serial Number is D2D6-1911

Directory of C:\Users\a\Documents

1-10-2025  01:03    <DIR>          .
1-10-2025  01:03    <DIR>          ..

5-04-2025  06:43    <DIR>          OneNote Notebooks
```

4 Create New Directory

- **Command:** mkdir <foldername>

- **Example:** mkdir newdir

5 Remove Directory

- **Command:** rmdir <foldername>

- **Example:** rmdir olddir

```
C:\Users\a\Desktop>rmdir prithviraj
```

6 Create / Write Output

- **Command:** echo <text>

- **Example:** echo Hello World

```
C:\Users\a\Desktop>echo "hellow OS! "
"hellow OS! "
```

7 Display File Content

- **Command:** type <filename>

- **Example:** type file.txt

```
C:\Users\a\Desktop>type prithvi.txt
I LOVE OS !
C:\Users\a\Desktop>_
```

8 Copy File

- **Command:** copy <source> <destination>

- **Example:** copy file.txt backup.txt

```
I LOVE OS !
C:\Users\a\Desktop>copy prithvi.txt isha.txt
Overwrite isha.txt? (Yes/No/All): _
```

---

9 Move / Rename File

- **Command:** move <source> <destination>

- **Example:** move file.txt newdir\

```
C:\Users\a\Desktop>prithvi.txt isha.txt
```

---

10 Delete File

- **Command:** del <filename>

- **Example:** del file.txt

```
C:\Users\a\Desktop>del prithvi.txt
```

GIT BASH / LINUX COMMANDS

1 Display User Manual

- **Command:** man <command>

- **Example:** man ls

MINGW64:/c/Users/a

```
prithviraj@DESKTOP-4CLL0HE MINGW64 ~
$ ls --help
Usage: ls [OPTION]... [FILE]...
List information about the FILEs (the current directory by default).
Sort entries alphabetically if none of -cftuvSUX nor --sort is specified.
```

2 Display Current Directory

- **Command:** pwd

- **Example:** pwd

```
MINGW64:/c/Users/a/Desktop

prithviraj@DESKTOP-4CLLOHE MINGW64 ~/Desktop (master)
$ pwd
/c/Users/a/Desktop
```

---

3 Change Directory

- **Command:** cd <path>

- **Example:** cd /home/user/Documents

```
MINGW64:/c/Users/a

prithviraj@DESKTOP-4CLLOHE MINGW64 ~
$ cd Destop
```

---

4 List Files

- **Command:** ls

- **Example:** ls

```
prithviraj@DESKTOP-4CLLOHE MINGW64 ~
$ ls
'3D Objects'/          NTUSER.DAT{53b39e88-18c4-11ea-a811-000d3aa4692b}.TM.blf
 AppData/              NTUSER.DAT{53b39e88-18c4-11ea-a811-000d3aa4692b}.TMContain
'Application Data'@    NTUSER.DAT{53b39e88-18c4-11ea-a811-000d3aa4692b}.TMContain
```

---

5 Create Directory

- **Command:** mkdir <dirname>

- **Example:** mkdir newdir

```
prithviraj@DESKTOP-4CLLOHE MINGW64 ~/desktop (master)
$ mkdir Hiios
```

6 **Display File Content**

- **Command:** cat <filename>

- **Example:** cat file.txt

---

7 **Edit File**

- **Command:** nano <filename>

- **Example:** nano file.txt

```
prithviraj@DESKTOP-4CLL0HE MINGW64 ~/desktop (master)
$ cat ishap.txt
I LOVE OS!
```

```
MINGW64:/c/Users/ishak/OneDrive/Desktop

 GNU nano 8.7                                    OS1.txt
I LOVE OS !
```

---

8 **Concatenate Files**

- **Command:** cat file1 file2 > outputfile

- **Example:** cat a.txt b.txt > c.txt

```
I LOVE OS!
prithviraj@DESKTOP-4CLL0HE MINGW64 ~/desktop (master)
$ cat qwertyu.txt poiuyt.txt > empty.txt
```

9 Remove File

- **Command:** rm <filename>

- **Example:** rm file.txt

```
prithviraj@DESKTOP-4CLLOHE MINGW64 ~/desktop (master)
$ rm isha.txt
```

10 Remove Empty Directory

- **Command:** rmdir <dirname>

- **Example:** rmdir olddir

```
prithviraj@DESKTOP-4CLLOHE MINGW64 ~/desktop (master)
$ rmdir hellowOs
```

1 1 Copy File / Directory
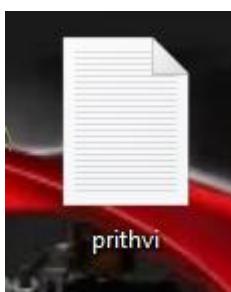

- **Command:** cp <source> <destination>

- **Example:** cp file.txt backup/

```
prithviraj@DESKTOP-4CLLOHE MINGW64 ~/desktop (master)
$ cp prithvi.txt isha.txt
```

1 2 Move / Rename

- **Command:** mv <source> <destination>

- **Example:** mv file.txt newdir/

```
prithviraj@DESKTOP-4CLLOHE MINGW64 ~/desktop (master)
$ mv ishap.txt prithvi.txt
```

prithvi

1 3 Search Text in File

- **Command:** grep "<string>" <file>

- **Example:** grep "error" log.txt

```
prithviraj@DESKTOP-4CLLOHE MINGW64 ~/Desktop (master)
$ grep "os" yashu.txt
i love os !
```

1 4 First N Lines

- **Command:** head -n N <file>

- **Example:** head -n 10 file.txt

```
prithviraj@DESKTOP-4CLLOHE MINGW64 ~/Desktop (master)
$ head -n 1 yashu.txt
i love os !
```

1 5 Last N Lines

- **Command:** tail -n N <file>

- **Example:** tail -n 10 file.txt

```
i love os !
prithviraj@DESKTOP-4CLLOHE MINGW64 ~/Desktop (master)
$ tail -n 10 yashu.txt
i love os !
```

FILE PERMISSIONS (ONLY GIT BASH / LINUX)

1 6 Remove Read Permission (Owner)

- chmod u-r file.txt

1 7 Change Specific Permissions

- chmod u+r,w-x,g+w file.txt

`18` Write for Owner Only

- chmod u+w,o-rwx file.txt

`19` Assign Permissions

- chmod u+rwx,g+rx,o+r file.txt

`20` RWX to Others

- chmod o+rwx file.txt

`21` Remove All Permissions

- chmod a-rwx file.txt

`22` Numeric Mode – 700

- chmod 700 file.txt

`23` Numeric Mode – 600

- chmod 600 file.txt

`24` Execute Owner, Read Others

- chmod u+x,g+r,o+r file.txt

`25` Execute for All

- chmod a+x script.sh

```
prithviraj@DESKTOP-4CLL0HE MINGW64 ~
$ cd Desktop

prithviraj@DESKTOP-4CLL0HE MINGW64 ~/Desktop (master)
$ chmod u-wx,g+w file.txt

prithviraj@DESKTOP-4CLL0HE MINGW64 ~/Desktop (master)
$ chmod u+w,o-rwx file.txt

prithviraj@DESKTOP-4CLL0HE MINGW64 ~/Desktop (master)
$ chmod u+rwx,g+rx,o+r file.txt

prithviraj@DESKTOP-4CLL0HE MINGW64 ~/Desktop (master)
$ chmod o+rwx file.txt

prithviraj@DESKTOP-4CLL0HE MINGW64 ~/Desktop (master)
$ chmod a-rwx file.txt

prithviraj@DESKTOP-4CLL0HE MINGW64 ~/Desktop (master)
$ chmod 700 file.txt

prithviraj@DESKTOP-4CLL0HE MINGW64 ~/Desktop (master)
$ chmod 600 file.txt

prithviraj@DESKTOP-4CLL0HE MINGW64 ~/Desktop (master)
$ chmod u+x,g+r,o+r file.txt

prithviraj@DESKTOP-4CLL0HE MINGW64 ~/Desktop (master)
$ chmod a+x script.sh
chmod: cannot access 'script.sh': No such file or directory

prithviraj@DESKTOP-4CLL0HE MINGW64 ~/Desktop (master)
$ chmod a+x file.txt

prithviraj@DESKTOP-4CLL0HE MINGW64 ~/Desktop (master)
$
```
